

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph 13 beginning on page 4, line 25, and ending on page 5, line 8, with the following replacement paragraph:

In accordance with another aspect of the present invention, a computer system is provided for dynamically verifying that a resource module is compatible with a current version of an operating system. The computer system includes a resource loader for loading a resource from a resource module, a default resource module containing at least one resource, an alternate resource module containing one or more resources localized from a default resource module, and a unique number that represents the resource content of the default resource module from which the alternate resource module was localized. This unique number can include ~~can include~~ a checksum. The resource loader loads a resource from the alternate resource module when the resource content from which the alternate resource module was localized is the same as the resource content of the current default resource module. In accordance with additional aspects of the present invention, a computer-readable medium having a computer-executable module for dynamically verifying that a resource is compatible with a current version of an operating system is provided.
